Here it is - the **final release of SimplyWiki 1.1**! This version is packed with new features and improvements and you are encouraged to upgrade to this version, if you are using SimplyWiki 1.0, or even an older version of Wiwimod. If you haven't tried this module, yet, SimplyWiki is one of the best wiki modules for ImpressCMS and XOOPS, and the only native module for them. There are only a few small changes since the RC release, addressing the system search results.

What's New in 1.1 New blocks: Tags, Top Tags (can only be used if the Tag module is installed) New block: Add Page - can be placed anywhere on your site to add a new wiki page. The block only displays if the user has write privileges in the wiki   New Quick Add field addedÂ - similar to the Add Page block, but displays on the the wiki page, if enabled   New block: Page List - options to list by create date, modified date, last viewed date or number of revisions, different display modes and customizable date format   CAPTCHA added to edit form along with a config option to enable/disable   Can select any page to be the top page for the module   Summary can be entered for each revision   New page information - creator, create date, views, last viewed, revisions (count), summary - can be displayed on all pages. Configuration allows you select which information displays   New database structure for improved performance and greater flexibility **Getting the new version** You can download the new version as a .zip or tar.gz package SimplyWiki 1.1 Final zip file SimplyWiki 1.1 Final tar.gz file
